Sprint 2 Report

Datum

11/04/24

Actions to Stop Doing:

This sprint some user stories got bottlenecked by other stories. The user department features like delete files couldn't be created because we didn't have all the user functionality working.

Actions to Start Doing:

We need to start allocating more team members to tasks that become more difficult as they appear. This sprint user authentication and permissions became the bottleneck and instead of more team members jumping on, the people not involved jumped ahead and worked on future tasks.

Actions to Keep Doing:

We have a good system of dividing up work. Our methods ensure that developers have a partner or few people to work on their task together for more complex challenges. Relatively productive spikes and work sessions. Continuing to communicate with team members

Work Completed/Not Completed:

AI summarization of a pdf was completed.
Department pages were set up & files can be listed.
User authentication & cookie storage has been completed.
User permissions need to be completed.

Work Completion Rate:

Specific User Stories Completed -

Completed:
- As an employee in any department, I want to access a summary of the types of documents I use every day.
- As a user from any department, I want to access the knowledge base through a website.
- As a Merchandiser, I want to source high-quality and innovative products from reliable manufacturers, and match them to buyer quotes.
- As a Logistics Manager, I want to manage the logistics of shipping bulky items from suppliers in Europe and Asia to our clients in the USA.
- As a quality assurance specialist, I want to view products that are awaiting approval, and either approve or reject them after review
- As an employee in any department, I want to search the database.

Days in the Sprint: 14
User Stories Per day: 0.35
Story Points Completed: 41

Hours/Day: 2.93
